

VirusKeeper 2009 Pro

Antivirus & Antispyware

Paris, December 10th 2008

PRESS RELEASE

Launch of the 2009 edition of VirusKeeper antivirus software

Today the software company AxBx is announcing the release of the 2009 versions of its VirusKeeper antivirus software.

Unlike most antivirus solutions based mainly on a list of known viruses, VirusKeeper identifies malicious programs through behavioural analysis. VirusKeeper's exclusive analysis engine is therefore able to rapidly detect threats without having to wait for updates.

Along with behavioural analysis, VirusKeeper Pro also analyses files using traditional signature scanning. By combining different detection techniques, VirusKeeper Pro guarantees one of the highest levels of protection available.

There are two versions of VirusKeeper 2009 now available:

- The "Standard" version, which includes the exclusive real-time engine that detects viruses, spyware and malicious programs through behavioural analysis. This version can be used alone or as a complement to a traditional antivirus scanner.

- The "Pro" version, which includes both the behavioural analysis engine and traditional scanners as well as additional protection.

The new VirusKeeper 2009 Pro integrates in one single product the best protection technologies currently available: real-time shield, behavioural analysis, automatic scanner, traditional antivirus/anti-spyware/anti-rootkit scanners, Internet browser protection, Messenger protection, protection of strategic system files.

Main new features of VirusKeeper 2009 Pro:

- A new 9th generation analysis engine to detect and neutralise the latest forms of current threats
- New "Messenger Protect" feature to protect your instant messaging software (Messenger) in real time and detect and neutralise "MSN viruses" and worms spread through this channel
- New "Back Door Detect" protection to automatically detect any back door opened by a known or unknown Trojan horse or spyware
- A new NetWatch function to identify with just one click all programs connected to the network or the Internet and thereby unmask the toughest Trojan horses and spyware
- A new "Cookies Manager" function to identify and easily delete undesirable cookies
- A new graphic interface that ensures rapid and intuitive handling

VirusKeeper 2009 Pro ensures complete protection against current threats: viruses, worms, Trojan horses, spyware, malware, diallers, rootkits and browser attacks.

VirusKeeper 2009 is now available on the official website: www.viruskeeper.com

VirusKeeper 2009 is on sale at the price of €29.90 including tax for the Standard version and €49.90 for the Pro version. The VirusKeeper licence allows the software to be installed on 1, 2 or 3 computers.

Information on free trial versions at www.viruskeeper.com

A press kit including the clipping file and a copy of the complete software is available to editorial staff on request.

About AxBx

AxBx is a software publishing company that designs, develops and distributes utility and security software. AxBx publishes in particular the TestLAB, VistaZIP, and VirusKeeper software.

In 10 years, AxBx has built up recognised expertise in the design of security and utilitarian software. AxBx software is available in 4 languages (French, English, German and Spanish) and distributed in over 28 countries.
